

On the radar, the Large Hadron Collider is a particle booster, built to beam up protons in very high speed and opposite directions, until they collide creating a huge amount of energy capable to [b]reproduce similar cosmic conditions that have creating such phenomena as dark matter, antimatter and ultimately the creation of the universe billions of years ago. That's the official explanation provided by the scientists involved with this project, but according to OTHER scientists, as the physicist experts Prof Irina Aref'eva, Dr Igor Volovich, the Astronomer Martin Rees, the physicist Adrian Kent of Cambridge, the space engineer Richard Wagner and the chemist and physicist Ph.D Otto Rossler, the LHC, indeed is a device capable to open black holes. According to some UFO researchers, the LHC could be, indeed, a STARGATE machine, opening "portable" wormholes, what may be related with increase of UFO activity in Europe, lately.

I did some investigation and I'm convinced that the Hadron Collider can be a stargate device, built with a specific purpose and the scientists involved with it, are lying to mankind. I don't know if I hit something, but after the thread I've posted on Above Top Secret forum, exposing the Collider-Stargate conspiracy, the post was closed and some days later my posting privileges on ATS were removed and I was banned.

Thus I decided to put the result of my researchers in the video you are gonna watch now, however I had to make a summary of the information, in order to short the video. You can find very interesting and detailed data below:
